What do I want you to know?

1. Agile has history
2. Agile is Lean
3. Agile has many approaches
4. Agility should matter to you

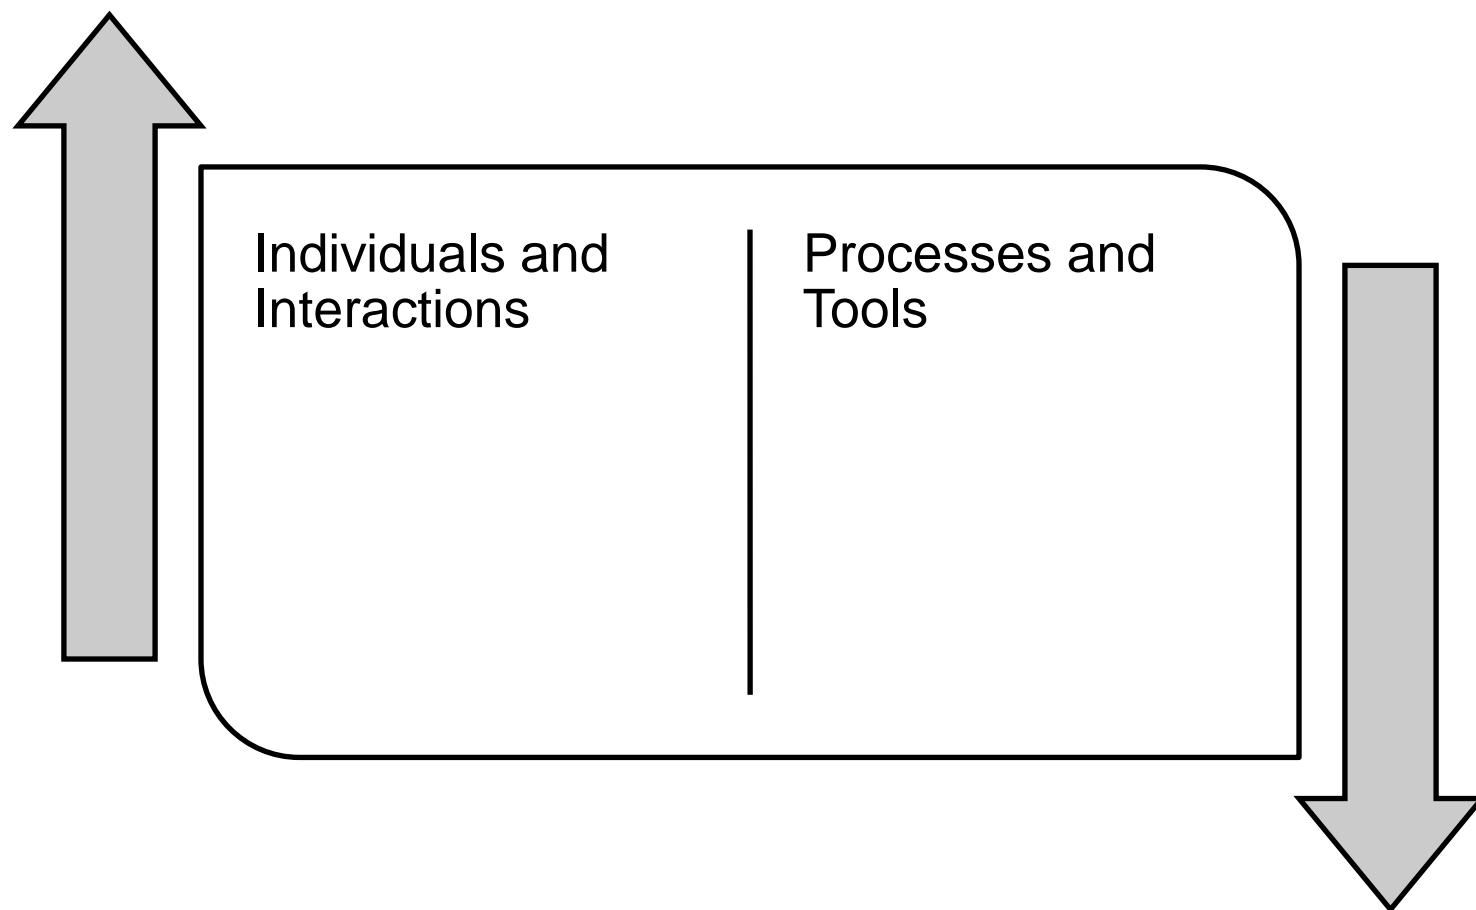

What is Agile?

An iterative and incremental approach to software development that uses a specific set of values and principles expressed in the Agile Manifesto

***We are uncovering better ways of developing software
by doing it and helping others do it.
Through this work we have come to value...***

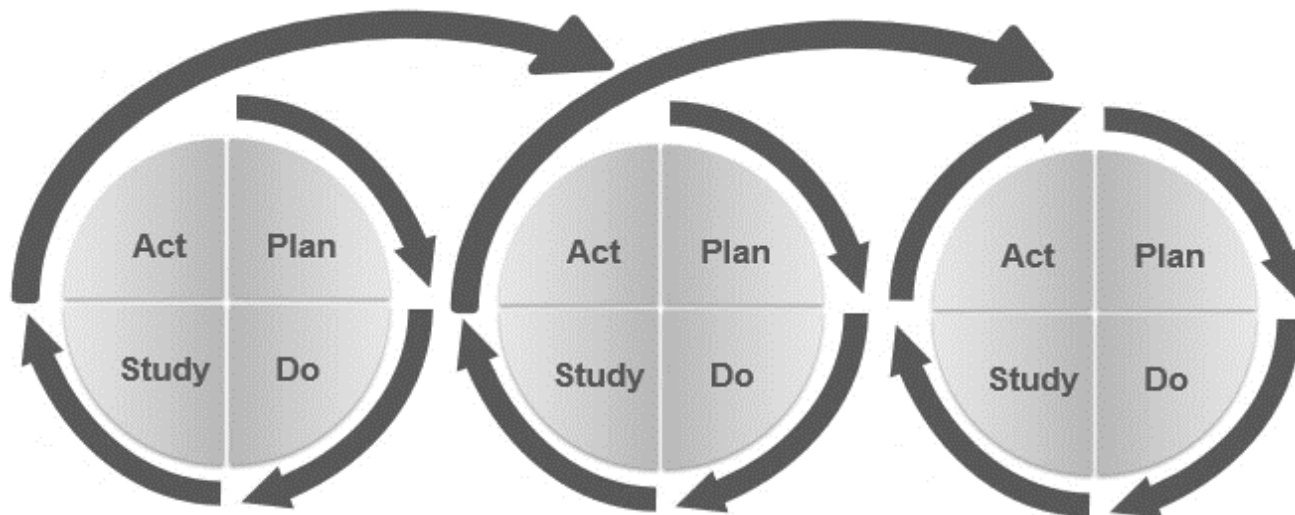

The Agile Manifesto

Waterfall Project Management

Lean

Agile

**Develop, Test
& Feedback**

**Develop, Test
& Feedback**

**Develop, Test &
Feedback, Release**

Why does Eastman IT need Agile?

- Projects take too long
- Understanding need vs. request is difficult
- Lack of deep alignment with internal partners
- Unable to easily make changes
- Onboarding employees takes too long
- Measures focused on schedule and budget
- Too many things “In Process”...
- ...and not enough things getting “Complete”

Agile Approaches

Eastman IT's Agile Approach

Types of Work

Ways of Working

Choose Your Own Adventure!

Agile Ceremonies

Agile Ceremonies

- Visioning / User Story Mapping
- Sprint / Iteration Planning
- Daily Scrum / Standup
- Demo and Review
- Retrospective
- Scrum of Scrums

Ceremonies: Daily Standup

- Communicate progress
 - Commit to work
 - Share impediments
1. What did you plan to accomplish yesterday?
 2. What was the result of your work yesterday?
 3. If you did not meet your plan, what caused the deviation?
 4. What do you plan to get done today?
 5. Are there any distractions or impediments that need to be addressed?
 6. Product Owner Comments

Ceremonies: Retrospective

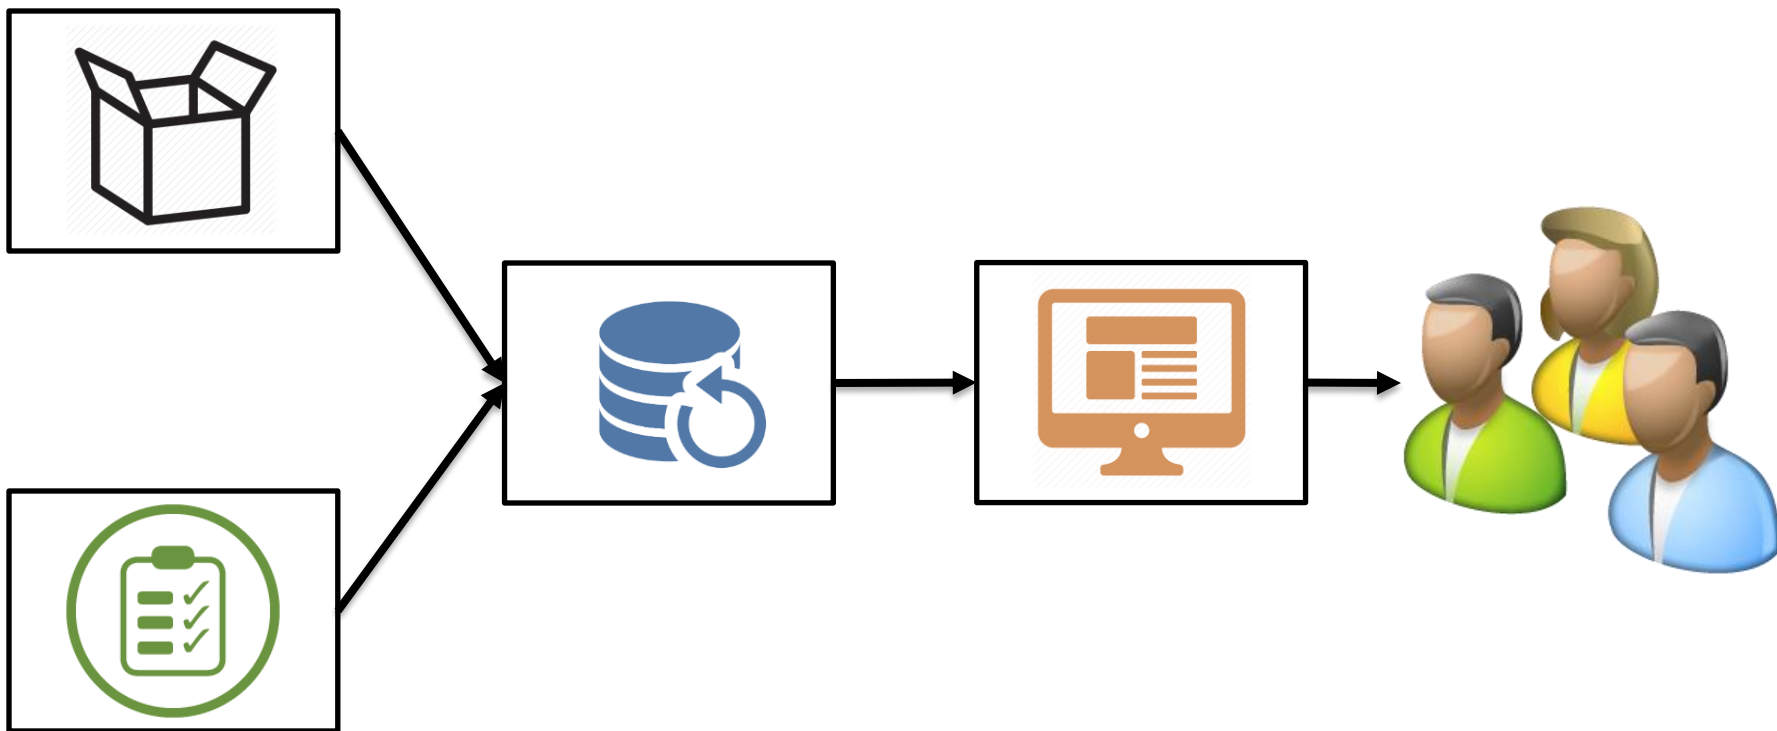

- Scrum format for continuous improvement
- Frequent occurrence
 - Live data collection
 - Review and renew each sprint / iteration

Eastman IT Agile Results

Eastman IT Agile Results

- Projects take too long **Agile 45% faster**
- Understanding need vs. request is difficult
- **8/12 Agile teams aligned to value stream**
- Lack of deep alignment with internal partners
- Unable to easily manage **Partner-owned backlogs**
- Onboarding **Agile now preferred for onboarding**
- Metrics **Now focused on velocity and commitment**
- Too many things “In Process”
- **We still suck at this, but we’re working on it.**
- ...and not enough things getting complete

Client Feedback

“Traditionally, this project would have taken over six months. You guys did it in nine weeks and gave us exactly what we needed.”

Supply Chain project Product Owner

g(1)
(2; a1[] = 0; for each f
Sflag=tr

```

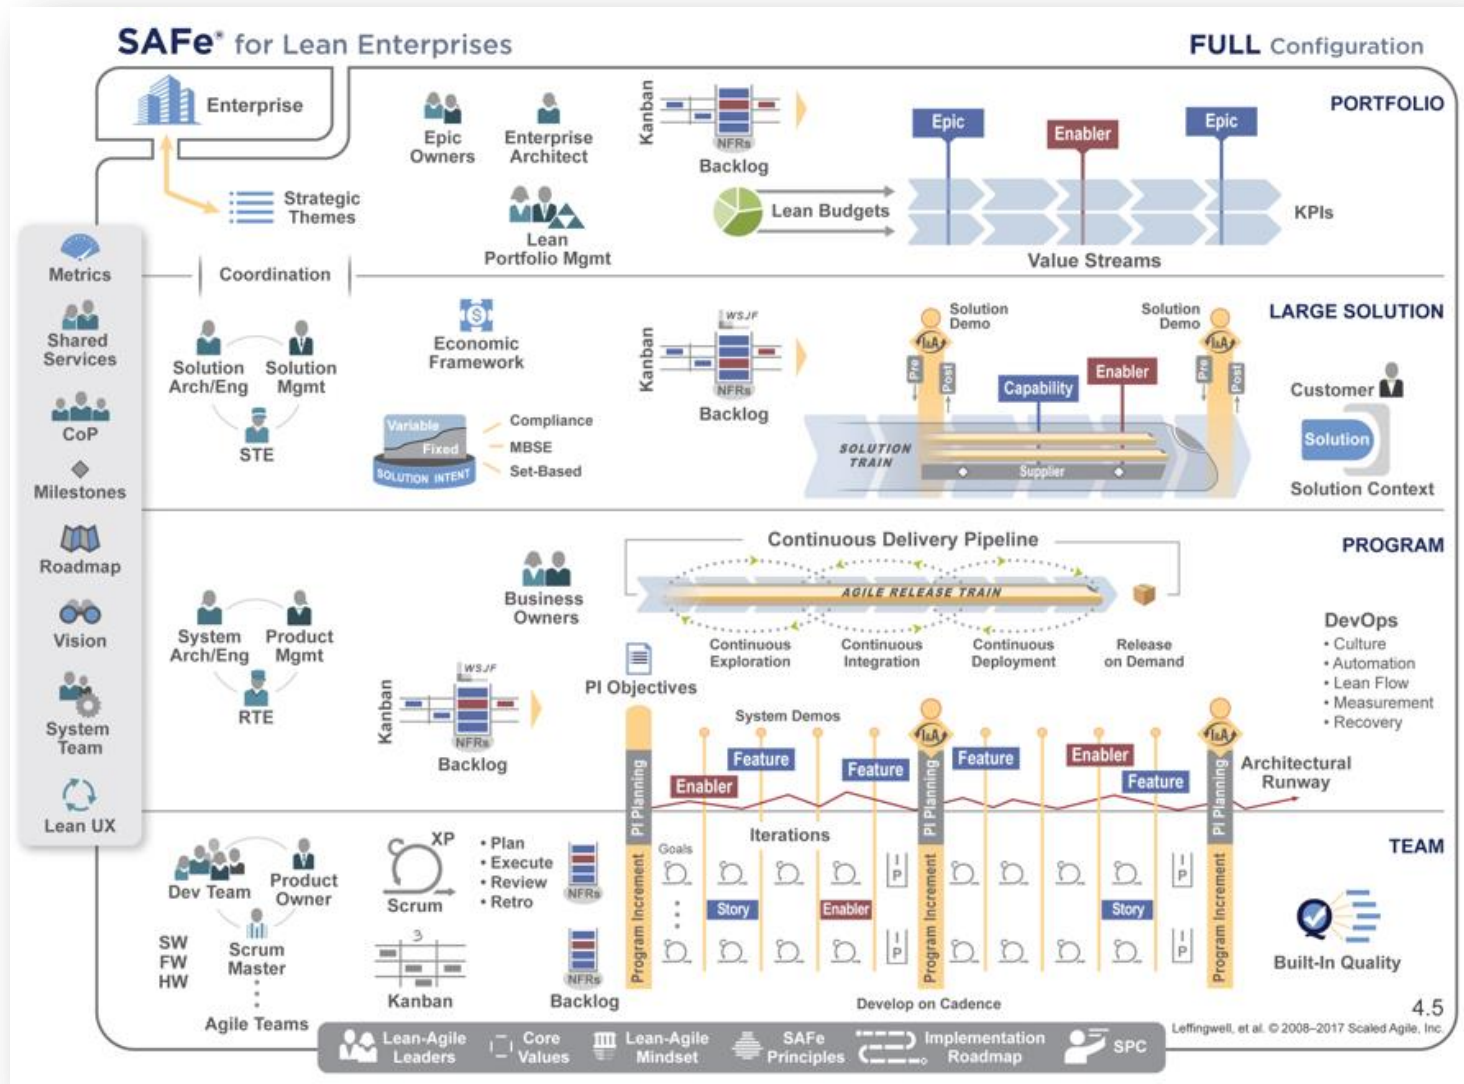

Code Jams

- One week or less events where teams:
- Collaborate across orgs → Networking
- Focus on a single problem → Speed
- Use non-prescriptive tech → Innovation
- Manage work with Agile → Flexibility

...a software development Kaizen Event...

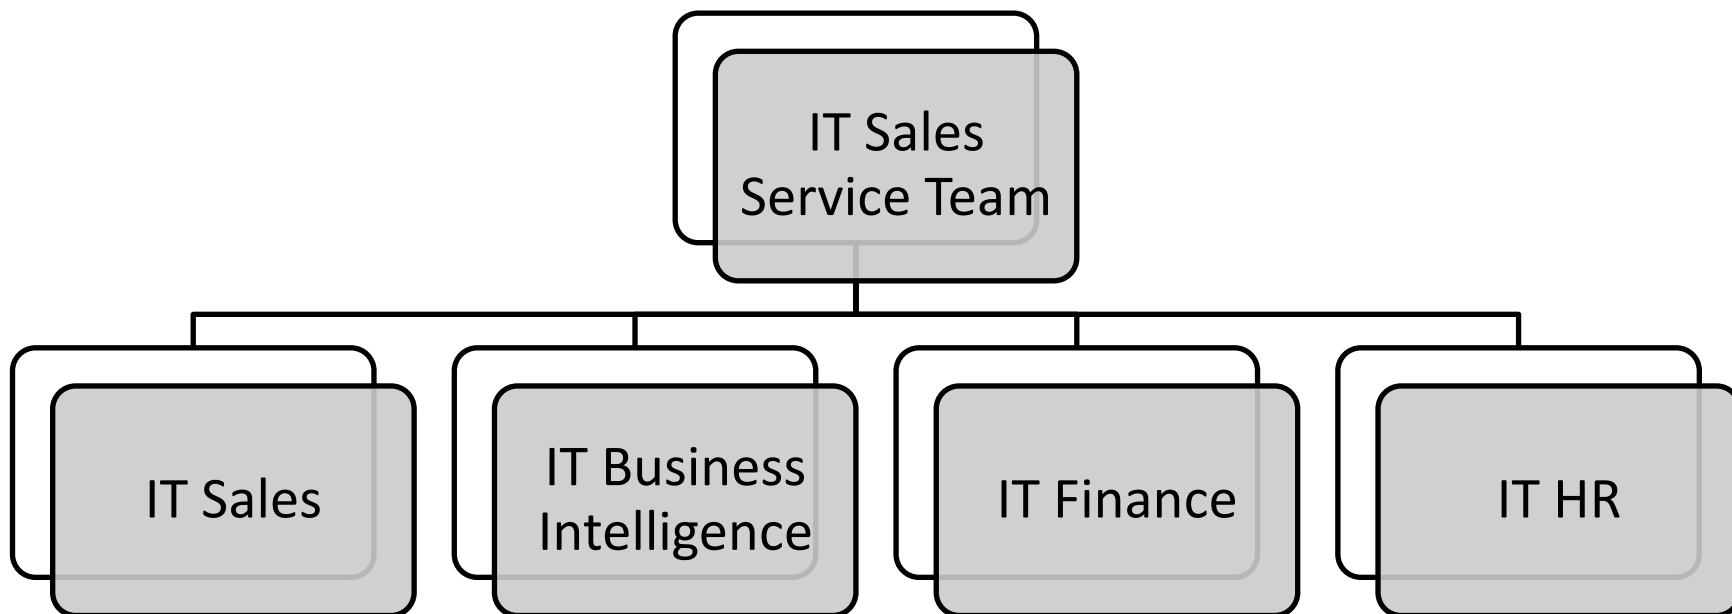

Scaled Agile Framework (SAFe)

Scaled Agile Framework (SAFe)

- Pioneered by Dean Leffingwell
- Significantly influenced by Lean
- Primary takeaways:
 - Align work/Agile teams with value stream
 - Plan the whole value stream
 - Schedule backwards from capacity
 - Continuously (re)prioritize
 - Limit WIP

SAFe in Eastman IT (Example)

Collocation

Collocation

- The ideal, not the standard or norm
- Significantly increases cross functional engagement
- Significantly reduces waiting and rework
- Team >>> Gemba
- Considerations:
 - Collaborative workspace
 - Global employee base
 - Collaboration tech (low or high)
 - Personality types

Task Boards

Task Boards

- Manual or electronic
- To Do, In Process, Waiting, Done
- Why task boards?
 - Visual
 - Interactive
 - Engaging
 - Ownership
 - Accomplishment

Conclusion

What are Eastman's next steps?

- Expose and visualize all work
- Limit WIP by planning backwards from capacity
- Continue alignment of delivery teams and Agile teams with value streams
- Plan work at value stream level (SAFe)

Why should agility matter to you?

1. Speed wins
2. Perfection equals second place
3. Who's perfection is it anyway?
4. Energizes employees
5. Energizes customers
