

ONLINE EXCLUSIVE: 5SToday Offers Free Kaizen Guide

Lake Oswego, OR-based 5SToday, a company dedicated to providing products and services related to the 5S program, has released a free kaizen guide for companies to use for the proper implementation of the process on-site.

Quality management is built on proven standards that can be designed with a systematic approach. In business, 5S represents the methodology for lean management that frequently applies to production and manufacturing operations.

With 5S implemented, facilities can benefit from reduced hazards, less clutter, simplified tasks, good workflow and effective use of space, which can ultimately lead to procedure development and enhanced discipline.

Assisting businesses to implement 5S and kaizen, 5SToday offers the free kaizen guide to lead companies toward achieving teamwork, personal discipline, improved morale, quality circles and acceptance of suggestions for improvement. The guide is easy to understand and provides a good foundation to kaizen and its structure.

“We are very happy about this new free guide and hope that it helps many manufacturing companies with their kaizen events,” said 5SToday’s Mike Wilson.

The company also offers other supplies and solutions on its website including label printers, pipe markers, floor tapes, traction tapes and 5S lean posters.
